

ROMEX BV FROM RHENEN REACHES AN AGREEMENT WITH MG-PRODUCTS FROM RIJKEVOORT, REGARDING THE ACTIVITIES OF ITS PRODUCT GROUP “TESTING AND MEASUREMENT”.

Left Mr. M. van Son (Romex) and on the right Mr. M. van Daal (MG Products)

ROMEX BV has been a renowned, ISO 9001 and ISO 14001 certified supplier to the high-tech industry since 1969 and specializes in the supply of more than 8,000 high-quality products used in the assembly, production, installation, repair and testing of electronic-products and components.

After the takeover of Euroelectron BV in 2011, Romex BV has set up a product group “Testing and Measurement” with, among other things, product lines from the Euroelectron BV delivery package. Within Romex’s delivery package, this test and measurement group has grown into a successful product line with annual stable growth and turnover over the past 13 years, and is now a household name in the high-tech industry of test solutions for electronics assembly, manufacturing and repair, within the Benelux and beyond.

With well-known brand names such as 6TL Engineering, DigitalTest, ECT (Everett Charles Technology), QA-Technology, VPC (Virginia Panel Corporation), Optomistic, MG-Products, SMH Technology Flashrunner 2.0, Feasa LED Analyzers, JTAG Technologies Boundary scan test solutions en Segger J-link programmers, YokowoDS, OI-Instruments and very recently with the development of the “DFT Smart Testfixture concept”, this product group is very active and successful.

To make sure that the “Testing and Measurement” product group will be decisive, efficient and stronger in the future, Romex looked for a reliable partner, who can technically support and further expand this product group. In this search, Romex BV ended up at one of its suppliers, MG-Products from Rijkevoort, and meanwhile, they have come to an agreement.

This agreement involves the takeover of all sales, supply and support activities of the Romex product group “Testing and Measurement” and the associated suppliers by MG-Products, as of July 1, 2024.

Since its founding in 2009, **MG-PRODUCTS BV** has grown into a household name as a mechanical supplier for the electronics production and development industry. MG products produces, among other things, tools for the production of electronics, such as Test Adapters and Solder Pallets.

The product group “Testing and Measurement” will be placed under the product group DFT (Designed for Test) within MG-Products. This name reflects what MG-Products wants to achieve with this addition to its product-package.

The MG and 6TL test-fixture solutions are well-known within the electronics industry and will be combined in one place within DFT.

What does this mean for you as a customer of Romex T&M.

By bringing all T&M activities of Romex and MG-Products in the new product group “DFT”, we can serve you better as a customer and unburden you even more. Whether you are looking for a test fixture kit or a complete turnkey test solution, DFT is your partner for all your electrical test solutions.

Peter van Oostrom has been responsible for the Testing and Measurement department within Romex BV for the past 13 years. He will move over to MG-Products and will be responsible for developing and integrating the product lines and for providing technical support for all new and existing customers. He will work closely with the current team at MG-Products.

Stronger together into the future with DFT “Designed For Test”.
